PROFESSIONAL SUMMARY

Senior Android Engineer with 5+ years of experience building native applications in Kotlin, with a strong focus on clean architecture, modularization, automated testing, and continuous delivery. Proven track record in large-scale projects at fintechs and mobile security companies, driving technical decisions, establishing code quality standards, and championing a testing culture in teams where it was virtually nonexistent.

EXPERIENCE

Android Engineer | PicPay | March 2025 – April 2026

- Part of the team responsible for developing corporate payment solutions (PJ) at one of Brazil's largest digital banks, using Kotlin, Jetpack Compose, Clean Architecture, and MVVM.
- Introduced a testing culture from scratch during legacy system refactoring — directly improving code coverage, reducing production incidents, and increasing delivery reliability.
- Go-to reference for architectural decisions, defining code standards and best practices across the team.
- Worked on multiple payment methods including bank slips (boleto), Pix, and card payments.
- Worked in a large-scale multimodular monorepo, integrating engineering logs across multiple ViewModels.

Android Engineer | Caf | May 2024 – March 2025

- Part of the mobile security SDK team, with development in Kotlin and Swift.
- Led the complete redesign of the FaceLiveness SDK from scratch — new modular architecture with 95% test coverage and significant gains in performance and scalability.
- Implemented reverse proxy integration for both Android and iOS FaceLiveness SDKs.
- Developed analytics features with runtime metric reporting and remote configuration via Firestore.
- Managed SDK flavors to support different Protobuf variants (Lite and standard) depending on the client's integration context.

Android Engineer | Invillia / PagBank | January 2022 – April 2024

- Part of the team behind one of Brazil's most widely used Android payment SDKs and apps for card terminals, built with Kotlin and Java.
- Implemented R8 for reverse engineering protection.
- Built a CI pipeline for instrumented tests using Docker Compose and Gradle.
- Automated code documentation with Dokka via GitHub Actions.
- Managed PagBank payment SDK flavors across multiple integration contexts.

Android Developer | Top Information | January 2021 – January 2022

- Maintained legacy Java projects and developed Kotlin applications integrated with Salesforce.
- Led the creation of the company's first native Android app in Kotlin.
- Built a native Kotlin upload library using the Salesforce Composite API.
- Created the company's first Flutter app to reduce onboarding time.

TECHNICAL SKILLS

Languages & Mobile: Kotlin (advanced), Java, Swift, Flutter

Android: Jetpack Compose, MVVM, Clean Architecture, Modularization, Flavors, R8/ProGuard, Android Studio (profiling, debugging, analysis)

Testing: Unit & integration testing, JUnit, Mockk, Turbine, code coverage

CI/CD & DevOps: GitHub Actions, Docker Compose, Gradle, secrets management, delivery pipelines

Observability: Firebase Crashlytics, Google BigQuery, engineering logs, runtime analytics

Languages: English (Fluent), Portuguese (Native)

EDUCATION

Postgraduate – Software Architecture, Cybersecurity & Data Engineering – Pontifical Catholic University (PUC) • Curitiba, PR | 2024 – 2025

Postgraduate – Mobile Application Development – Pontifical Catholic University (PUC) • Curitiba, PR | 2023 – 2025

Bachelor's in Software Engineering – UniCesumar • Maringá, PR | 2020 – 2024

Associate's in Systems Analysis and Development – UniCesumar • Maringá, PR | 2020 – 2023

OPEN SOURCE & PERSONAL PROJECTS

- ProjectMiddleware — Backend service in Kotlin/Ktor with modular middleware:core architecture. REST API for flexible JSON transformation, containerized with Docker, deployed on Fly.io, CI via GitHub Actions, documented with Dokka. github.com/LeonardoBai12/ProjectMiddleware
- Middleware Playground — KMP client app (Android/Jetpack Compose + iOS/SwiftUI) consuming the ProjectMiddleware backend. Shared ViewModels via Clean Architecture, SQLDelight, Ktor Client, authentication service.
- AstorMemory-KMP — Compose Multiplatform memory card game published on both Google Play and App Store, with a custom Gradle plugin for resource generation and cross-platform audio system.
- GitHub: github.com/LeonardoBai12
